Installation Advisory

Prevent Color Bleed With Neoprene Wake Covers

SPF6

SPF8

PRODUCTS AFFECTED:

- SPF6 with M262-WAKE / M262B-WAKE
- SPF8 with M282-WAKE / M282B-WAKE

ISSUE:

The SPF6 & SPF8 wakeboard tower speaker covers are hand-crafted and dyed with love using duotone Neoprene (black outside / red inside). Washing us makes us happy and avoids our dye from possibly “bleeding” on your speaker enclosures. Let’s not repeat that time in college your girlfriend thought you were a sensitive guy wearing pink because you accidentally washed red socks in your underwear, O.K.?

SOLUTION:

Before use, we suggest hand washing these Neoprene covers twice to stabilize the dye.

WASH CARE:

- Hand wash in warm water and mild soap.
- Rinse thoroughly and air dry.
- Do not wring or dry in a dryer.

hand wash

do not bleach

Drip dry

do not wring
